

Setup Guide: Remote Control Relay

Time Allocation: 60 Minutes

Challenge Overview

A student team must teleoperate the robot through a slalom course, swapping drivers at the halfway mark.

Environment & Arena Setup

- **1. Course Dimensions:** Clear a smooth indoor space measuring approximately 10 feet by 20 feet.
- **2. Slalom Obstacles:** Set up 5 to 6 cones or weighted markers in a straight line down the center of the course, spaced roughly 3 feet apart, creating a zig-zag slalom path.
- **3. Halfway Zone:** Mark a clear 'Driver Swap Zone' (a taped box on the floor) right after the final slalom cone, indicating where the robot must come to a complete stop for the handoff.
- **4. Start and Finish:** Establish a clear starting line at one end of the course and a finish line at the opposite end.
- **5. Safety & Boundaries:** Use boundary tape or extra barriers around the perimeter to keep stray robots from wandering into spectators or other equipment.
